U.S. Appln. No. 09/672,154 Reply to Office Action mailed April 15, 2009

IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in

the application. An identifier indicating the status of each claim is provided.

Listing of Claims

(Currently Amended) A broadcast program retrieval system for retrieving

a desired broadcast program among a plurality of broadcast programs, comprising:

a data server including a database configured to receive and store broadcast

program information, and at least one function for searching the broadcast program information,

which includes at least one program retrieval identification code and other information related to

broadcast programs,

wherein the program retrieval identification code is a function of content and a

time slot; and

a user server configured to receive and store the broadcast program information,

said user server operating to send to the data server at least one content keyword for searching

the broadcast program information for the desired broadcast program,

wherein said user server is configured to receive from the data server only

program retrieval identification codes,

wherein the user server that receives the program retrieval codes previously

received the broadcast program information, and

wherein each program identification code is included in an event information

table appended to the broadcast program information, and

Frommer Lawrence & Haug LLP 745 Fifth Avenue New York NY 10151 212-588-0800 Customer Number 20999 U.S. Appln. No. 09/672,154 PATENT Reply to Office Action mailed April 15, 2009 Attorney Docket No.450100-02733

wherein only a select number of program retrieval identification codes are

received, each of the program retrieval identification codes related to said at least one content

keyword as a result of the searching by the data server,

wherein said broadcast program information stored on said data server is identical

to said broadcast program information stored on said user server, and

wherein the select number of program retrieval identification codes received from

the data server enables said user server to retrieve a select number of broadcast program

information stored in the user server, and allows a user to review the select number of broadcast

program information and to select the desired broadcast program from among a select number of

broadcast programs corresponding to the reviewed select number of broadcast program

information, said broadcast programs broadcast by digital satellite.

2. (Previously Presented) A broadcast program retrieval system according to

Claim 1, further comprising

a communication link configured to connect said data server and said user server.

3. (Previously Presented) A broadcast program retrieval system according to

Claim 1, wherein said at least one content keyword includes an element of content forming each

broadcast program.

00668522

4. (Previously Presented) A broadcast program retrieval system according to Claim 1, wherein the program retrieval identification codes are included in an event identification region of an event information table appended to each broadcast program.

5. (Canceled)

(Previously Presented) A broadcast program retrieval system according to
Claim 1, wherein the broadcast program information includes electronic program guide (EPG) information.

7. (Previously Presented) A broadcast program retrieval system according to claim 1, wherein each of said at least one program retrieval identification code is assigned a different identification number even when a first broadcast program identified by a first program retrieval identification code is a rebroadcast of a second broadcast program, such that the second program broadcast program is assigned a second program retrieval identification code.

 (Previously Presented) A broadcast program retrieval system according to claim 1, further comprising:

a keyword database in the data server, said keyword database including a plurality of keywords used to match said at least one content keyword received from the user server.

U.S. Appln. No. 09/672,154 Reply to Office Action mailed April 15, 2009

9. (Currently Amended) A broadcast program retrieval method for retrieving a

desired broadcast program among a plurality of broadcast programs, comprising:

configuring a user server to receive and store broadcast program information,

which includes at least one program retrieval identification code and other information related to

said plurality of broadcast programs,

wherein the program retrieval identification code is a function of content and a

time slot;

configuring a data server to receive and store the broadcast program information,

wherein the user server that receives the program retrieval codes previously

received the broadcast program information, and

wherein each program identification code is included in an event information

table appended to the broadcast program information,

wherein said broadcast program information stored on said data server is identical

to said broadcast program information stored on said user server;

transmitting from the user server to the data server at least one keyword;

searching the broadcast program information in the data server using at least one

searching function;

transmitting from the data server to the user server only program retrieval

identification codes,

wherein only a select number of program retrieval identification codes are

transmitted, each of the program retrieval identification codes related to said at least one

keyword;

retrieving a select number of broadcast program information stored in the user

server using the select number of program retrieval identification codes received from the data

server:

reviewing the select number of broadcast program information; and

selecting the desired broadcast program from among a select number of broadcast

programs corresponding to the reviewed select number of broadcast program information,

wherein said broadcast programs broadcast by digital satellite.

10. (Previously Presented) A broadcast program retrieval method according to

claim 9, wherein each of said at least one program retrieval identification code is assigned a

different identification number even when a first broadcast program identified by a first program

retrieval identification code is a rebroadcast of a second broadcast program, such that the second

program broadcast program is assigned a second program retrieval identification code.

11. (Previously Presented) A broadcast program retrieval method according to

claim 9, further comprising:

configuring a keyword database in the data server, said keyword database

including a plurality of keywords; and

using said plurality of keywords to match said at least one content keyword

received from the user server.

12. (Previously Presented) A broadcast program retrieval method according to

claim 11, further comprising:

processing and storing in the keyword database any changes made to said other

information related to said plurality of broadcast programs.

13. (Previously Presented) A broadcast program retrieval method according to

claim 12, wherein said other information related to said plurality of broadcast programs includes

a list of performers appearing on each of said plurality of broadcast programs.

14. (Previously Presented) A broadcast program retrieval method according to

claim 9, further comprising:

selecting an appropriate function from said at least one searching function,

wherein said appropriate function satisfies user preferences reflected in said at least one

content keyword.
